

Overview Of How The Just Eat Integration Works

This document is an overview of how the Just Eat orders arrive into the EPOS and how they print along with some screenshots.

Customers will place their order on Just Eat as normal.

The Just Eat order will arrive into the Just Eat POS system where it will be accepted by you guys.

Unfortunately, the JE POS has to remain on the counter!

Once accepted it will print from the Just Eat POS but this can be set to *No Printout (This is done from your POS instore)*

The Just Eat orders will arrive in either **Assign to Driver** or **Collect**.

Assign to Driver - Specifies which orders are Just Eat deliveries

Collect - Specifies which orders are Just Eat collect

No	Time	Name	Address	SMS	P/Code	£	Mins Late
4	13:00	Internet	Collection	N/A	7.50	Cash	12

The Just Eat orders can take upto 60 seconds to appear on your EPOS and will print a receipt. The below is an example of how a Just Eat Delivery receipt prints from our system (**Left**) and a

copy of Just Eats receipt (**Right**)

The below is an example of how a Just Eat Collection receipt prints from our system (**Left**) and a copy of Just Eats receipt (**Right**)

Insta Drive (Left QR Code) - Scanning this QR code will open the default map on the driver's phone

Insta Call (Righth QR Code) - Scanning this QR code will automatically dial the Just Eat number and verification code

Any further questions regarding the Just Eat integration please speak with Alec or Brett
