InTouch Command Line / commands

- InTouch Command Line / commands

InTouch Command Line / commands

on the command line after wcimain.exe if you leave a space and put /? where ? is one off the modifier letters the program will behave as the / command dictates.

For example adding /X to the command line makes the program use the default printer instead of one called receipt. This can be useful if the printer can't be renamed for some reason.

Below is a list of / commands :-

/A = Makes the audit trails to keep option be 0 so it never deletes them.
/B? = ? = letter which replaces A in the .AUD extension of the audit trails.
So you could use the same menu with 2 seperate sets of takings
/C? = End of day time if later than 5am (?=8)
/CC = Call Center setup
/CCC = Call Center shop setup
/D = Drivers Assign & Payment screen
/DD = Drivers Assign screen only, no Payments
/DC = Drivers Assign & Payment and Order collection screen
/DCD = Doesn't update Customers database
/DK = Only Collection?
/E =Dual screen with 2nd screen as customer facing display.(put JPEGS in c:\winci\images)
/EF =As above but only for adverts doesn't link items on an order to the screen (/EF600 to force screen height)
/F \\server\c\winci = Path to program data
/G = Table Service
/GG = Goes straight into table service
/HOD???? = Head Office ???? =Lic No.
/I = Makes this computer Server
/J \\server\c\winci = Reports Directory

/L = Training Mode

/M = Makeline, if more than 1 makeline can have the numbers 1-4 after the M

/N = 2 Yespay installations

/O = Adds Occasional Menu to a terminal

/P = Prints new orders when they arrive on the screen, usually for call centre

/PXX = Checks for missing internet orders

/PZZ = W.DAT is stored in the Data directory

/Q = Tablet Server

/R = MakeLine Locks record when viewing

/S1 = Forces IBM cutter code for printer.

/T? = ? = Till number, splits the takings of seperate tills on server analysis

/TT? = ? = Till number, splits the takings of seperate tills and needs setting up in Options>Reports (Split by Till and fill in till numbers to match TT?)

/U = Makes the program 800x600 instead of fullscreen

/U500*4000 = Makes the program different size

/V = Makes Main screen only have Restaurant/Bookings/Shutdown

/W = Doesn't show restaurant button

/X = Uses the default printer instead of RECEIPT

Or if you put /Xnprinter name (with n being the printer number 1 receipt, 2 kitchen,3 kitchen2 4 Boxedge and K3 kitchen 3) and the printers name.

/Y?????? = Prints the location the order came from on any receipts printed, so ?????? could = chicken or chinese or till1
