The receipt section is how the receipt is produced for restaurant orders.

- The Restaurant Text option allows you to specify what is printed on the top of the receipt (This is usually just Restaurant but can be whatever you like eg. Eat in) There is also a tick box so it can be printed in red or reverse if it is a thermal printer
- The save order section allows you to print a full receipt for new orders if that option is ticked and what to do when an order is amended "Reprint Order" prints the full order again, "Ask to reprint" asks and if you say yes prints the full order and "Print Amendments" just prints the changes to the order.
- Action on Finalising defaults to "No Action" but "Print Order", "Print Order and Kitchen", "Print Order & Open Till" and "Print Order & Kitchen & Open Till" can be chosen.

The other options are just tick boxes and fairly self explanatory.

The Restaurant Service Charge options can set how the program deals with the service charge.

- Start time lets you choose a start time for the service charge. If it is left as 0 then the charge is always applied.
- The "Receipt text" is what is printed on the receipt for the service charge.
- The % charge will work out the service charge as a % of the total bill.
- The "Add to Charge If Covers More Than" will only add the charge if the order is for more than a certain number of covers. If you want it for every order leave this as 0.
- The "Ask to add charge" drop down defaults to "No" but can be set to "Yes" or "Can Edit". If it is set to ask it will come up with the prompt every time to ask. If it is set to edit it will come up with a calculator showing the service charge it has calculated but allowing you to change it.
- The "Calculates service Charge Before Any Discount" option calculates the service charge before you add any discount.
- The "Text if No Service Added" box allows you to enter what will be printed on the receipt if no service charge is added.

The Bookings Section is where you can set how the booking work if you have chosen it to appear.

- The first drop down allows you to say where or if the bookings button appears. It defaults to "None" but can be set to "On Main Menu" or "On Management Menu" and if set to either of these that is where the Bookings Button will appear.
- The "Must Enter Assistant Before Taking Bookings" option, if set, will ask for the assistant name first when placing a booking.
- The "Enable Lunch Time" option, if chosen, when you choose a day to place the booking will have a "Show Lunch" button at the bottom right and if you press this it will show the earlier period of time for that day

instead of a restaurant where you pay at the end on dining.

- The "Starter Button on Make line Screen" option, If you have an additional makeline set to by order a button will appear at the bottom right when you select an order saying "Startes Made".

If you click on here you will be presented with the table layout.

The image displays a graphical user interface for creating a table. It features a 4x4 grid of 16 numbered green circles (1-16) and a 17th green circle to the right. Below the grid are four green buttons labeled Area1, Area2, Area3, and Area4. A red 'Finished' button is at the bottom left. On the right, a control panel shows a green circle with '17', an 'Area' dropdown set to 'Area1', and a 'Colour' selector showing a green bar.

If you click on Table it will be highlighted and you can choose the name of the table, the colour, size and Shape.

The image shows a software interface for designing a table layout. On the left, there is a 4x4 grid of 16 numbered green circular tables. Table 1 is highlighted with a thick black border. A mouse cursor is positioned over table 14. Below the grid are four buttons labeled 'Area1', 'Area2', 'Area3', and 'Area4'. At the bottom left, there is a red button labeled 'Finished'.

On the right side, there is a control panel for a table. It shows a green circular table labeled '17'. Below it, there are input fields for 'Area' (set to 'Area1') and 'Colour' (set to green). Underneath, there is a 'Table' section with a 'Name' field (set to '1') and a 'Colour' field (set to green). Below these are 'Size' controls with a blue double-headed arrow and a vertical slider. At the bottom of the control panel, there are five red shape icons (oval, horizontal oval, circle, square, rectangle) each with a corresponding radio button.

Clicking and holding on a table will let you drag it into position so you can make the layout look more recognisable to your staff. Any tables that are not needed can be dragged to the top right or if you want to add tables you can drag them onto the layout from here.

The interface displays a 3x4 grid of tables numbered 1 through 12. A 13th table, represented by a green circle, is positioned to the right of the grid. A control panel on the right side of the interface allows for editing the properties of the selected table (13). The panel includes a text input for the table's name (currently '13'), a color selection bar (currently green), and a size adjustment slider. Below these controls are five radio buttons corresponding to different table shapes: a vertical oval, a horizontal oval, a small circle, a vertical rectangle, and a horizontal rectangle. The third radio button (small circle) is currently selected. Below the grid, there are four area selection buttons: 'Area1' (pink), 'Area2' (green), 'Area3' (green), and 'Area4' (green). A 'Finished' button is located at the bottom left of the interface.

You can also have different areas for the restaurant (eg upstairs and downstairs). If the areas are left blank they won't appear once you go into the restaurant section.

If you now click on Restaurant it will show you the tables again but this time tables with an order on them will show the value of the order and the number of covers.

Time	Name/Table	£

16 numbered tables arranged in a 4x4 grid. Table 2 is highlighted in green and contains the text:

2

£22.00

2 Covers

Cancel Today's Bookings Move ▼ New Bar Tab

If you click on a table with a current order instead of asking you the number of covers it will take you into the order so you can either edit it to add more items, save it to leave it how it was or finalise it to complete the order.

Also when you press Restaurant there is a bar section on the right. This allows you to start an order before a table has been allocated. If you click New Bar Tab it will ask you for a name and then the number of covers and then go into the order screen. If you save the order it will show in the Bar section with the customers name and the value.

To move an order from the bar or from one Table to another if you press on the move button at the bottom of the screen it will turn white and then press the bar order or table you want to move and that will then turn white and then click where it wants to be moved too.

If you get the message "In Use on another screen" either the table is being looked at on another screen or is locked. If it isn't on another screen to unlock it press the arrow next to Move and the button name will change to Release and if you then press this it will turn white and then press on

the table that was locked earlier and it should be OK now.

Another feature of the arrow is to change the Move button to say merge. If you press the arrow next to move twice it will change the title of the button to Merge. If you press Merge it will turn white and if you then choose a table it will let you move it to a currently open table and merge the 2 orders together,
